

LEAVE-BEHIND

Discovery to support. Working software every sprint.

Agile delivery with clear ownership — you see demos every two weeks, and you talk to the people writing the code.

01 Discovery

Goals, constraints, stakeholders. Problem definition before architecture.

02 Strategy

Architecture, stack, roadmap, and a scoped first module you can say yes to.

03 Development

Two-week sprints, CI, code review. Developers and AI agents build; you steer.

04 Testing

Unit, integration, performance, security checks, and UAT before go-live.

05 Deployment

Rollout plan, integrations, migration, and knowledge transfer.

06 Support

Monitoring, fixes, security updates, and a bucket of hours for small changes.

CADENCE

- ~30 min weekly call during active build
- End-of-sprint demo with working software
- WhatsApp with the engineers between meetings
- First working module typically in 4–8 weeks
